## Web Tools: Engineering-Capable Web Development

bd Systems creates enterprise-level engineering Web sites that allow program engineers to develop a disciplined, detailed engineering strategy with a robust tracking and reporting capability for enhanced program management. We tailor Web site layout and content to your program's engineering requirements. Our approach allows you to get the most up-to-date information to your group quickly, without outside assistance.

### Web Highlights

- Through requirements gathering and spiral development, we help you build your perfect Web site.
- CMS allows you to maintain your pages—no need to go through a Webmaster. Share information in a timely fashion.
- Create document templates for easy use by your team.
- Share tools and get the job done.

The image displays several screenshots of the AX/AXE Content Management System and the SMC Engineering & Acquisitions website. The top-left screenshot shows the CMS interface with a navigation menu on the left and a central content area. The top-right screenshot shows the SMC website's main page with a search bar and various navigation options. The bottom-left screenshot shows a detailed view of the SMC website's content, including a list of processes and a sidebar with navigation links. The bottom-right screenshot shows a page titled 'SMC Professional Training Program' with detailed information about training opportunities.
